What does it mean
to have a
BULLDOG Heat Pump?

**More Reliable
Heating Operation...**
since the compressors are not required
to provide heat.

**Lower Installed
Cost...** for emergency
generators since they can be sized
smaller with the BULLDOG. For the
Maplewood projects in
Massachusetts, there was an
estimated \$40,000 saved for each
of the two sites.

**Lower cost of
heating...**
30 % to 70 % lower or even more
with the BULLDOG using gas
instead of electricity.

THE BOTTOM LINE
*There are simply more Btu's in
one dollar's worth of natural
gas, than in one dollar's worth
of electricity.*

Lower Maintenance Cost...

...due to fewer mechanical failures. No reversing valves to fail and longer compressor life. Each BULLDOG unit is factory tested five separate ways to eliminate possible refrigerant leaks and EVERY SINGLE unit is factory run tested with water to ensure 100 % functionality in all modes of operation. Only when ALL tests have been successfully passed will our BULLDOG be allowed to ship from the factory.

Quicker Replacement... if ever the chassis needs to be replaced, it will only take a few minutes and will NOT require a service technician.

Lower Installed Cost... with 33% less water flow.

It means with a
BULLDOG you get a
heat pump that works
HARDER, LONGER, with
LESS hassle & energy than
any other heat pump on
the market.
