Assisted Living Facilities

What does it mean
to have a
BULLDOG Heat Pump?

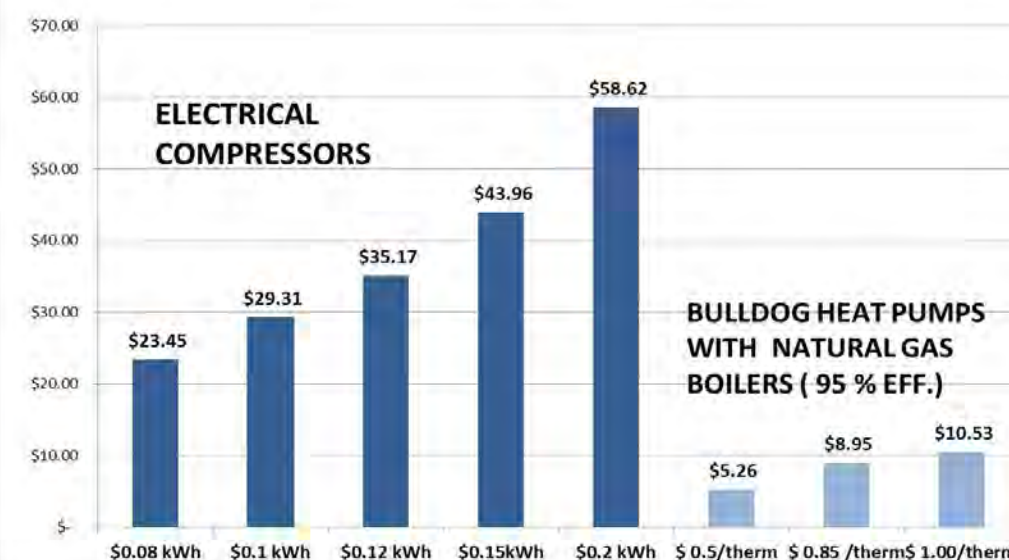

**More Reliable
Heating Operation...**
since the compressors are not required
to provide heat.

**Lower Installed
Cost...** for emergency gen-
erators since they do not have
to be sized for the compressors
while in the heating mode. For the
Maplewood projects in Massa-
chusetts, there was an estimat-
ed \$40,000 saved for each
of the two sites.

Cost to generate 1 Million Btu

**Lower Cost of
Heating...**

30 % to 70 % lower or even
more since the Bulldog
system does not heat with
electrical compressors.

*There are simply more Btu's
in a dollars worth of natu-
ral gas, than in a dollars
worth of electricity.*

Lower Maintenance Cost...

...due to fewer mechanical failures. There are no reversing valves to fail and the compressors are idle during the entire heating season. Each BULLDOG unit is factory tested three separate ways to eliminate possible refrigerant leaks. EVERY SINGLE unit is factory run tested with water to ensure 100 % functionality in all modes of operation. Only when ALL tests have been successfully passed will our BULLDOG be allowed to ship from the factory.

Quicker Replacement... if ever the chassis needs to be replaced. It will only take a few minutes and will NOT require a service technician.

Lower Installed Cost... with 1/3 less water flow.

**It means with a
BULLDOG you get a
heat pump that works
HARDER, LONGER, with
LESS hassle & energy than
any other heat pump on
the market.**
