Hospitality

# The Bulldog Advantage

**Lower Sound Levels**  
The BULLDOG was specifically designed in 1995 to address noise reduction in hotel HVAC systems. Turning the heating compressor OFF makes the BULLDOG unit as quiet as a fan coil.

Staybridge Suites, Columbus, OH

**Smaller Space**  
The BULLDOG takes up approximately half the area of other designs.

SpringHill Suites, Los Angeles, CA

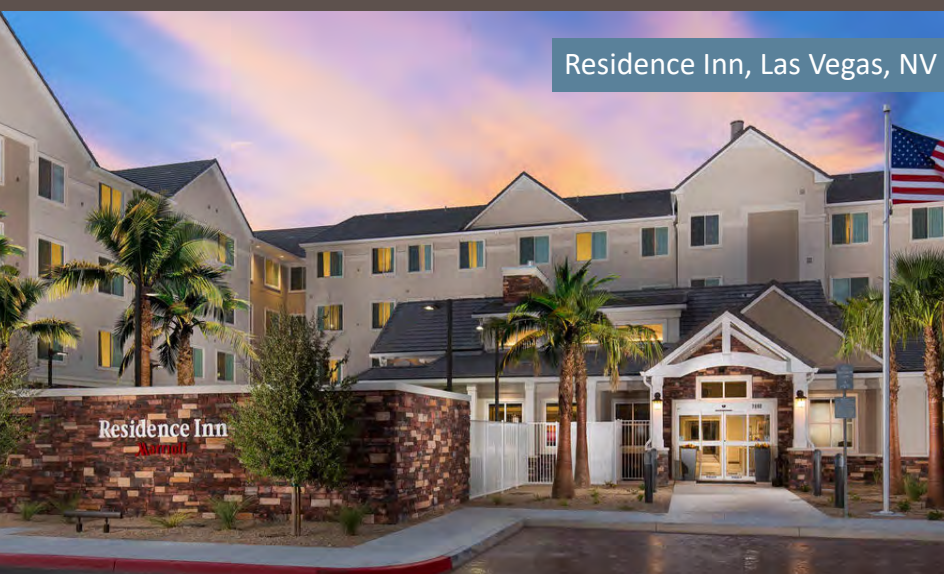

**Lower Energy Costs**  
Not using electricity as a fuel source results in 30% to 70% reduction in heating costs depending on the costs of utilities.

**Lower Maintenance Costs**  
Compressors will logically last longer and require less maintenance if they are not required for the heating cycle. With a simplified refrigeration design, there are fewer parts to fail.

**Lower Installation Cost**  
The BULLDOG system has many inherent design features that will significantly reduce the installation cost. For example, the Dedicated Outdoor Air System (DOAS) can be eliminated by bringing fresh air directly to the occupied space.

Residence Inn, Las Vegas, NV

**Less Downtime**  
With a 'plug and play' chassis, a custodian can easily change out a unit without the need to call a service contractor.

The Fairmont Empress, Victoria  
Renovation Project

**Dehumidification Capability**
