No other heat pump does more, with less.

The BULLDOG Heat Pump Advantage

Why use a BULLDOG Heat Pump?

CGC Group makes the BULLDOG Heat Pump, the most productive, worry-free heat pump in the building industry.

With BULLDOG you get a heat pump that works harder, longer, with less hassle and energy than any other heat pump on the market.

Because a Hydronic Heating system offers design flexibility and benefits that a reversing WSHP doesn't:

- It is quieter
- It has better heat sharing capability
- It is more reliable
- It uses less electricity
- It is equipped with modulating heat
- 40-70% lower heating costs
- It has lower failure rates
- It has fewer moving parts

Because a compressor that doesn't operate in heating:

- Doesn't make any noise
- Doesn't fail
- Doesn't consume any power
- Has lower operating costs
- Lasts longer

A BULLDOG system delivers benefits for the building owner, the occupants, and the budget:

- Dry cooler capability
- Dehumidification
- Smaller emergency generator
- Fewer water loops
- Fresh air delivered directly to occupied space
- Small footprint
- Chassis change out in minutes
- Low flow rate

What makes the BULLDOG system different and why is this significant to Geothermal?

The BULLDOG Geothermal system has a positive impact on the design and operation of the geothermal field. It allows for greater design flexibility that can help bring the geothermal field back to a balanced mode. This is accomplished with a design that allows for ALL HVAC equipment to be placed on one common fluid loop, which prevents overheating of the geothermal field and may result in a smaller geothermal field in cooling dominant building with significant capital cost reductions.

For more details, please refer to "*Geothermal Design Guide, Benefits of the BULLDOG System*".

No other heat pump does more, with less.

BULLDOG Heat Pump System Design

The BULLDOG Heat Pump System is a combination of two traditional commercial HVAC building technologies. The system combines conventional water cooled air conditioning and hydronic space heating, all in one package.

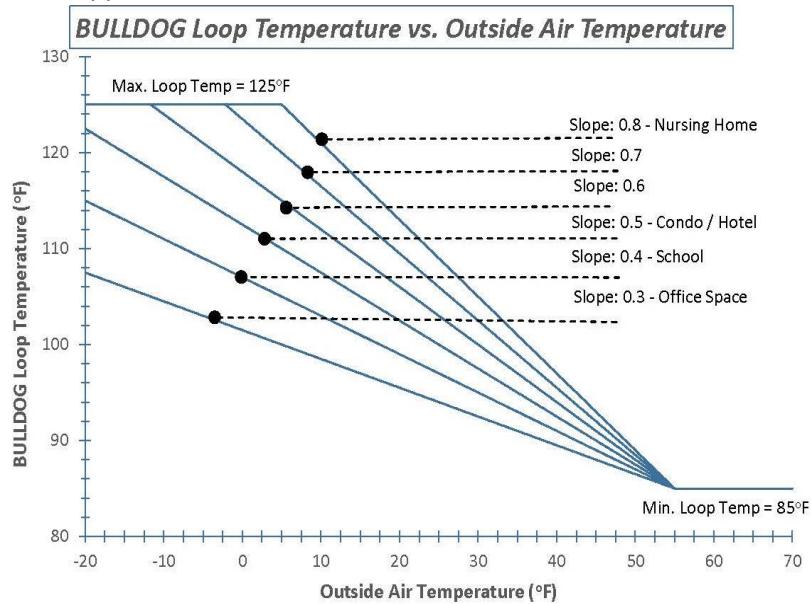

A BULLDOG unit operates as a fan coil in heating and a water cooled DX unit in cooling. The compressors do not operate in the heating mode. They can cool or heat any space at any time of the year. Instead of a refrigerant reversing valve for heating, the BULLDOG unit diverts the loop fluid to a hydronic heating coil located inside the unit.

The loop fluid varies in temperature depending on outdoor ambient conditions. As the ambient temperature gets colder, the loop fluid temperature is increased.

In order to have available heat at all times and in all zones, the BULLDOG loop temperature is maintained at 85°F (30°C) at an ambient temperature above 55°F; this will enable any unit to produce a minimum of 30% of its rated heating capacity. As the outside air temperature falls below 55°F (13°C) the loop temperature is increased. The nominal rate of increase is 0.40 degree increase in loop temperature for every degree drop in ambient. As such the loop temperature will be 104°F (40°C) at 8°F (-13°C) outside.

The advantage of the BULLDOG system is that the heating/cooling ratios can be tailored to the actual loads. To optimize the efficiency of the system the reset rate can be adjusted to follow loading. For example: when the cooling requirements of each zone are much higher than the heating loads, the set point reset rate can range from .25 to .40 degree increase per degree drop in ambient. Then at 15°F ambient, the loop temperature would be less than 100°F. Similarly, installations such as a seniors residence where heating is the dominant load, the set point reset rate can be steeper, perhaps as high as .75 degrees per degree ambient drop. Additionally, the set point reset rate start point can be moved several degrees higher or lower to suit the application.

The CGC Group offers a prepackaged system controller that is programmed to accommodate most system arrangements. Custom sequences can be programmed into the panel. The BULLDOG system controller has Modbus RTU and can be connected to a BACnet interface, allowing for it to be integrated into most BAS systems provided by others.

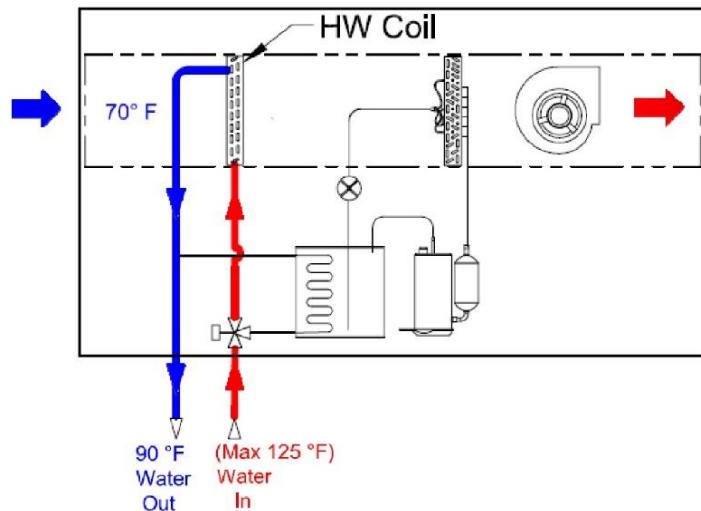

No other heat pump does more, with less.

Heating Cycle

The BULLDOG System's straightforward design derives maximum efficiency from existing principles.

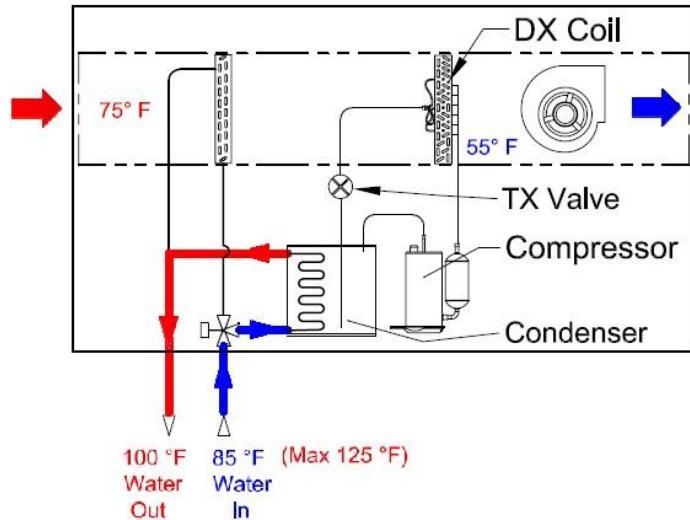

The heating cycle consists of a high efficiency fan motor drawing air over a simple hot water coil. This is the same mechanism employed by common fan coil units. Because the water loop temperature is scheduled to outdoor air temperature, maximum heat output is available when it is most needed (ie. – when it is coldest outside). As the outdoor air temperature rises, loop water temperatures are lowered to gain cooling efficiency.

Cooling Cycle

The best HVAC designs are only as good as the level of comfort they provide. Here the BULLDOG System once again excels, making cooling available year round through an ultra-quiet design.

The compressors are connected through a refrigeration piping system to a standard DX cooling coil. The heat removed from the air is rejected from the unit into the water loop via simple condenser.

Low Water Flow

We use better condensers than other manufacturers.

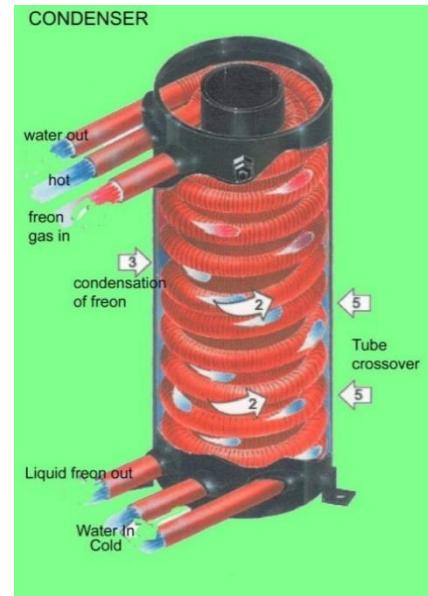

All manufacturers of regular WSHP use the heat exchanger on the left. It's a coaxial condenser and must also operate as an evaporator in the heating mode. The Bulldog is optimized for cooling mode only by utilizing a more effective condenser – the shell and tube on the right.

Effective capacity at only 2gpm/ton

Results:

- Smaller pumps
- **Smaller cooling towers**
- Smaller pipes
- Less electrical consumption
- Can tolerate higher EWT (125°F)
- Can operate with a Dry Cooler instead of Evaporative Tower thereby eliminating water make up and water treatment chemicals (and the threat of Legionella)
- Potentially smaller geothermal field
- Less prone to fouling

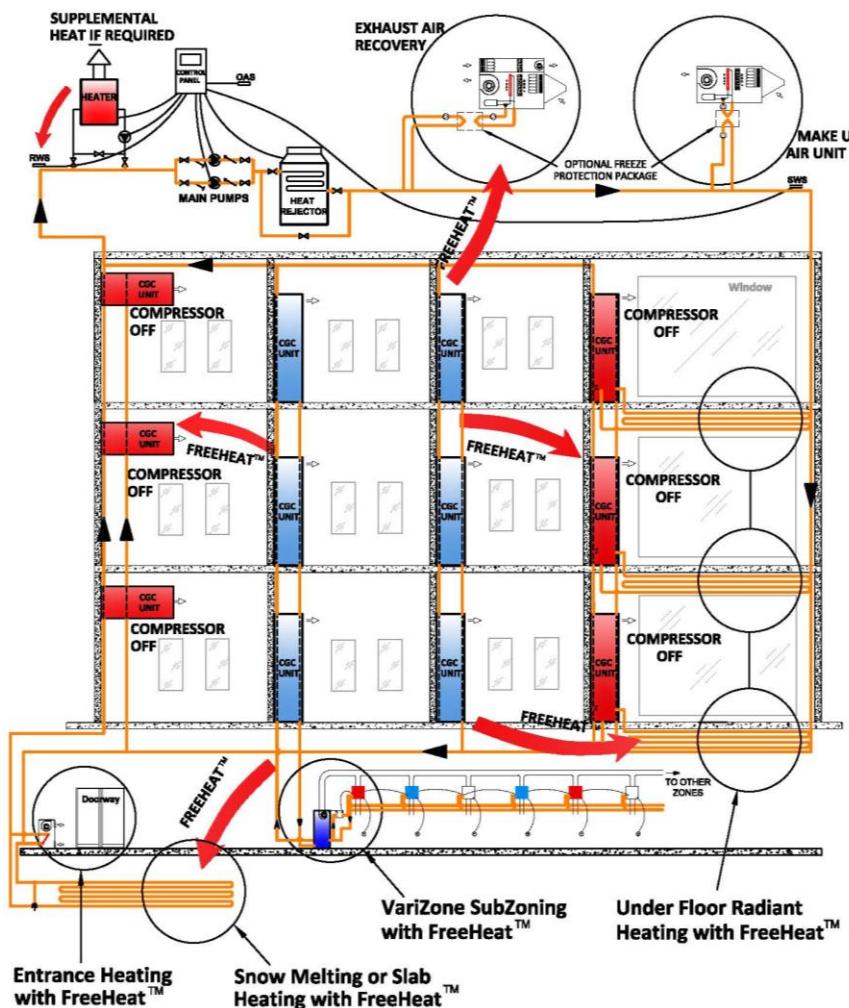

FreeHeat™

FreeHeat™ is defined as the process of reclaiming the heat generated within a building to directly satisfy the heating needs of the building, without additional energy input.

The BULLDOG Heat Pump System conserves heat within the fluid loop instead of rejecting it to the atmosphere through a heat sink. This FreeHeat™ can then be used for various building heating requirements. Even with elevated fluid temperatures (maximum 125°F), the BULLDOG Heat Pump is still able to perform mechanical cooling.

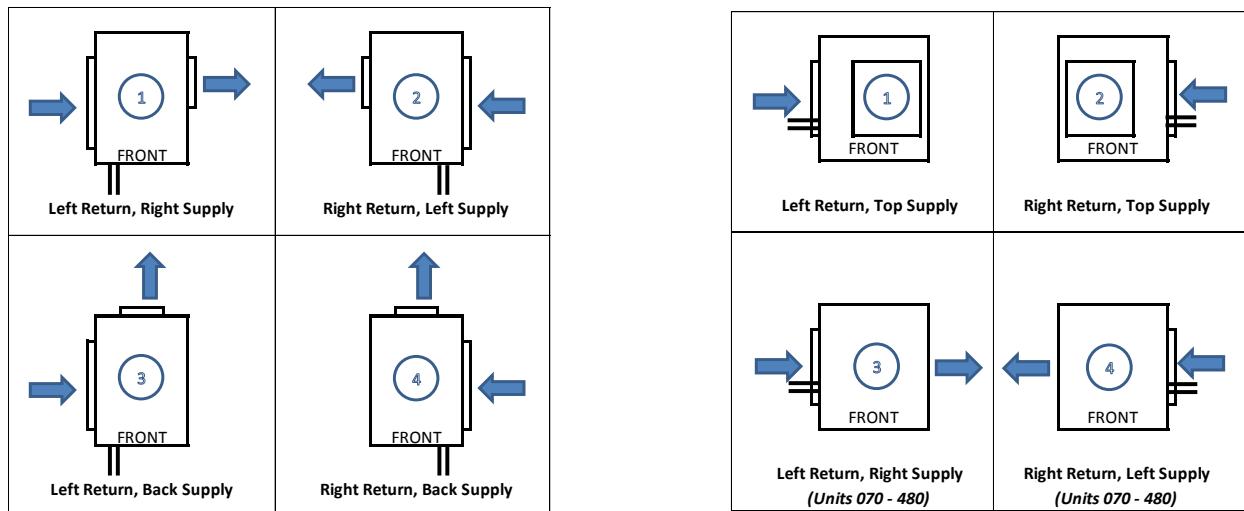

An example of how the BULLDOG design can take advantage of FreeHeat™ is for treating ventilation air. The cost to treat make up air constitutes a significant portion of the buildings total annual energy budget. Many buildings operate gas fired Make-Up Air units while simultaneously rejecting condenser heat to a heat sink. The energy consumed by the heat sink or tower can be significant. With the BULLDOG System, FreeHeat™ is used to treat the fresh air instead of rejecting the heat. This eliminates the consumption of a fuel source to heat the fresh air during shoulder season.

۱۷۴

LEGEND:

The diagram illustrates a supply air duct system. A large rectangular duct at the top is labeled "SUPPLY AIR" with an arrow pointing upwards. Below it, a smaller horizontal duct is labeled "RETURN AIR" with an arrow pointing downwards. The main supply duct has two vertical ports on its right side labeled "WATER CONNECTIONS". The bottom duct also has two vertical ports on its right side. The entire assembly is supported by a central vertical column.

Arg.3 Left Return, Back Supply

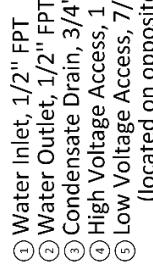

Arrg.4 Right Return, Back Supply

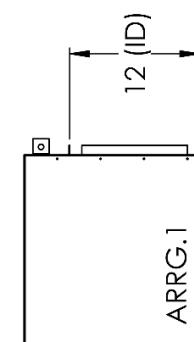

APPENDIX

- REMARKS:**

 - i) One disposable fiberglass filter included.
(14" x 20" x 1")
 - ii) Rubber in shear isolation included.
 - iii) Arrangement 1 is shown to provide essential dimensions.
 - iv) Recommended position for hanging clips is shown.
 - v)* Water connections are positioned on the same side as the return air.

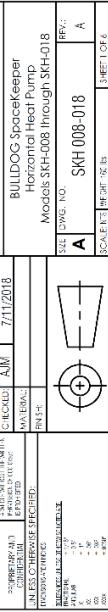

as High Voltage Access

The logo for Bulldog Heat Pump. It features a stylized bulldog head icon on the left, composed of a dark blue square and a white silhouette of a bulldog's face. To the right of the icon, the word "BULLDOG" is written in large, bold, blue capital letters. Below it, the words "HEAT PUMP" are written in a smaller, bold, blue capital letters.

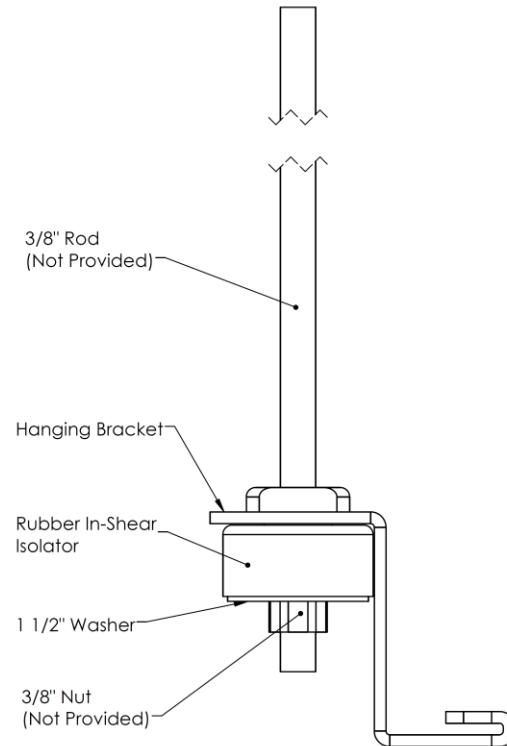

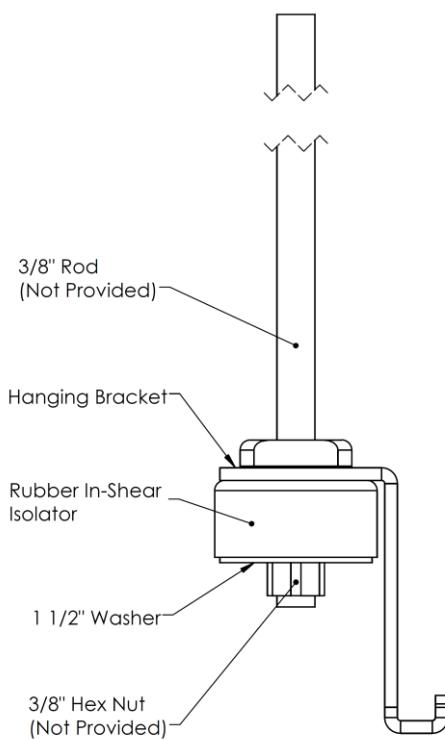

No other heat pump does more, with less.

SKH/ SKV – Detailed Options List

MISCELLANEOUS:			
Option	Available	Description	Option notes
2	SKV/SKH	Extended 5 year compressor warranty	This option provides an extended compressor only warranty for an additional 4 years. Shipping costs are not included. (parts only)
3	SKV/SKH	Extended 5 year refrigerant circuit warranty	This option provides an extended warranty for an additional 4 years for all refrigeration components including the compressor, the evaporator, the condenser, the TX valve, and the pressure switches. It does not include piping or refrigerant. Shipping costs are not included (parts only).
4	SKV 008-060	Painted cabinet	This option provides a painted cabinet for SKV008-060. (standard for SKV070-480)
6	SKV/SKH	Acoustigaurd™ Noise-Blok	Noise-Blok is a thin, dense, 2 pound per square foot noise barrier material used to line the inside compressor base of the SKH/V. This flexible, mineral filled sheeting is used in conjunction with the standard acoustic liner on the heat pump base and provides additional sound attenuation.
7.X	SKV/SKH	Ducted Filter Box	Can accommodate 1, 2 or 4" filter and allows return air ducting to heat pump with minimal leakage.

REFRIGERATION:			
Option	Available	Description	Option notes
10	SKV/SKH	Two step scroll	This option provides for two stage cooling capability through a two-step, single compressor that provides 30% capacity reduction when operating on first stage. (70% capacity). Internal controls are included to provide two stage operations. A two-stage thermostat is required. This is not available with option 40.
13	SKV 070-480	Tandem scroll set	This option provides improved part load efficiency over option 14. This is achieved using tandem compressors with one refrigeration circuit but two stages. The improvement in efficiency results when the system operates one compressor with the full size evaporator and condenser.
14	SKV 70-100		This option provides dual independent refrigeration circuits for partial redundancy. If an issue should affect one compressor circuit the other circuit is available to operate partial cooling until the unit can be repaired. Dual refrigeration circuits are standard on SKV120-480
15	SKV/SKH	Sight glass	This option provides a sight glass in the refrigeration circuit. Standard in sizes 070-480
16	SKV/SKH	Hot gas bypass	Option provides hot gas bypass for low load situations when partial cooling is required but the resulting compressor operation would create low pressure issues. Hot gas bypass injects hot refrigerant gas directly into the direct expansion distributor inducing a false load on the evaporator, warming it and increasing the suction pressure. Use this option when a two stage compressor is still not enough turn down for the cooling requirements.

CONTROLS:			
Option	Available	Description	Option notes
20	SKV/SKH	Aux heating stage	Heating output is tied to aux input. It is used for aux heat in some other part of space.
21	SKV/SKH	Condensate overflow protection	This option will provide a solid state condensate sensor that will terminate cooling operation if the drain-pan level rises too high. Condensate overflow alarm changes the state of the alarm lockout relay for remote monitoring.
22	SKV/SKH	Set up to 230 V/1	Select this option if the volt units are to operate at 230 volts single phase.
23	SKV/SKH	High % outside air control includes: Modulating valve, DAT sensor, and Flex controller	This option is for high percentage of untreated fresh air being introduced through the unit. It provides a discharge air temperature sensor controlling a 3-way modulating valve to maintain a set point discharge air temperature. When the unit is in a fan only call – the modulating heat valve maintains the discharge air temperature at the set point. If there is no call, the modulating valve moves to 50% open allowing water to cycle to maintain a minimum temperature in the coils. Consult with factory. This option is not compatible with demand flow (option 41).
24	SKV/SKH	Mount third party DDC	Select this option to have third party DDC controllers mounted on or in the unit. Included is a box to hold the controller and isolation transformer if there is no available space. Alarm signal will be provided to the DDC controller. The controller transmits calls and lockout signals to the onboard heat pump controller. Size of controller box adds to overall dimensions. For special wiring requirements, consult factory.

No other heat pump does more, with less.

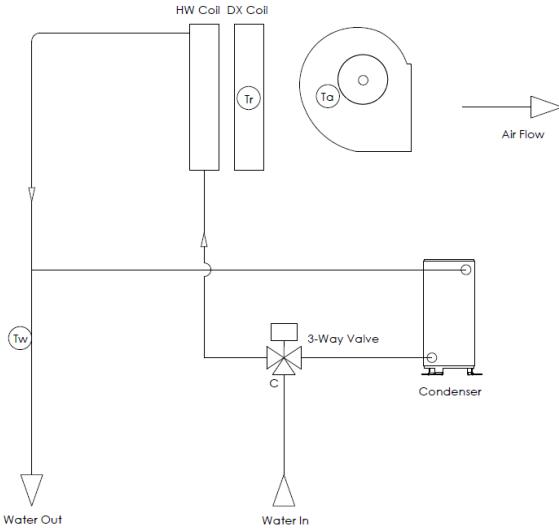

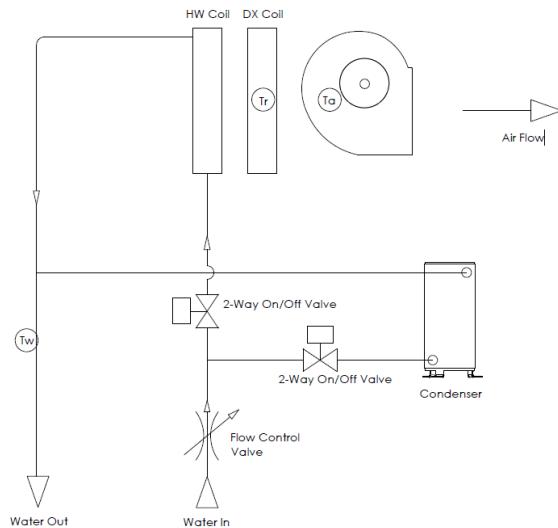

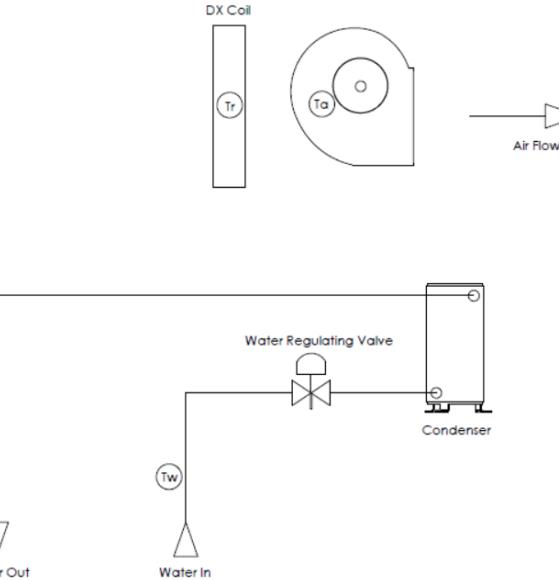

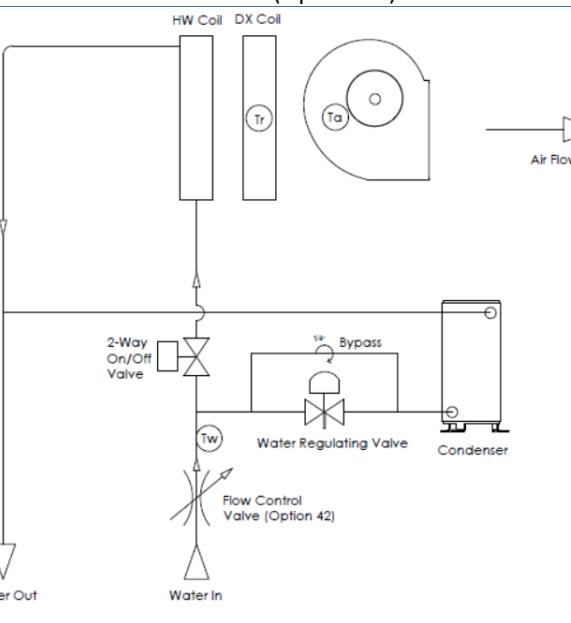

PACKAGES:			
Option	Available	Description	Option notes
33	SKV/SKH	VAV control	<ul style="list-style-type: none"> • Motor VAV configuration (Option 61V) • Two step compressor (Option 10) • Hot gas bypass (Option 16) • Flex board (Option 32) • Software • Hot water coil in reheat position
34	SKV/SKH	VAV control no heating	<ul style="list-style-type: none"> • Motor VAV configuration (Option 61V) • Two step compressor (Option 10) • Hot gas bypass (Option 16) • Flex board (Option 32) • Software • Deleting heating coil
35	SKV/SKH 008-060	Discharge heating control	<ul style="list-style-type: none"> • Modulating valve (Option 53C/D) • Discharge temperature control • Flex board (Option 32)
36	SKV/SKH 008-060	Outside air ventilation unit	<ul style="list-style-type: none"> • Modulating valve (Option 53C/D) • Discharge temperature control • Flex board (Option 32) • Two step compressor (Option 10) • Hot gas bypass (Option 16) • Software • Deleting heating coil
37	SKV/SKH 008-060	Variable airflow outside ventilation unit	<ul style="list-style-type: none"> • Motor VAV configuration (Option 61V) • Modulating valve (Option 53C/D) • Discharge temperature control • Flex board (Option 32) • Two step compressor (Option 10) • Hot gas bypass (Option 16) • Software • Hot water coil in reheat position

WATER SIDE:			
Option	Available	Description	Option notes
40	SKV/SKH	Pump or valve flow control signal	Select this option to provide a 24VAC signal for the control of a valve or a pump (supplied by others) to provide flow only during a heating or cooling call. Not available with option 10. Consult factory.
41	SKV/SKH	Demand flow control	This option is required for variable volume pumping systems. This option also provides an auto flow valve which is an automatic throttling valve that controls the amount of water through the unit when it is either heating or cooling.
41A	SKV/SKH	Demand flow - auto flow valve not included	This option is required for variable volume pumping systems. Auto flow valve is not included with this option.
41H	SKV/SKH	Demand flow Hays flow control valve	This option is required for variable volume pumping systems. A Hays auto flow valve is used instead of the standard auto flow valve and is used as an automatic throttling valve that controls the amount of water through the unit when it is either heating or cooling.
42	SKV/SKH	Auto flow limiting control	This option provides an auto flow valve which is an automatic throttling valve that controls the amount of water through the unit when it is either heating or cooling.
42H	SKV/SKH	Hays auto flow limiting control	This option provides a Hays auto flow valve to our standard unit. The auto flow valve is an automatic throttling valve that controls the amount of water through the unit when it is either heating or cooling.
44	SKV/SKH	Cooling only unit	This option provides a water-regulating valve. The unit becomes a demand flow unit. Heating coil is omitted.
45	SKV/SKH	FreeCool unit	This option provides a controller programmed to allow for non-compressor based cooling if the supply water is sufficiently cool (<45°F). Includes a water-regulating valve. The unit becomes a demand flow unit.
48	SKV/SKH	High close off rated valve	This option provides an alternative valve(s) with higher close-off pressure ratings

WATER SIDE:			
Option	Available	Description	Option notes
53C	SKV/SKH	Modulating heat valve - Continuous flow	This option provides a modulating valve for heating with continuous flow. Autoflow valve not included. Requires a 2-10V signal by others.
53D	SKV/SKH	Modulating heat valve - Demand flow	This option provides a modulating valve for heating with demand flow. Requires a 2-10V signal by others. Autoflow valve not included.
54C	SKV/SKH	Dehumidification control with constant flow	This option provides the heating coil in the reheat position for dehumidification. Internal controls are provided but a thermostat/humidistat is required. Thermostat must utilize a third output to energize dehumidification. Thermostats that activate simultaneously the heat and cool calls to energize dehumidification will not work. Autoflow valve not included.
54D	SKV/SKH	Dehumidification control with demand flow	This option provides the heating coil in the reheat position for dehumidification. Internal controls are provided but a thermostat/humidistat is required. Thermostat/humidistat must utilize a third output to energize dehumidification. Thermostats that activate simultaneously the heat and cool calls to energize dehumidification will not work. Minimum load required for sizes 008 to 036. Autoflow valve not included.
59	SKV/SKH	7/8" Condensate hose	This option provides the unit with a 3/4" condensate hose – swaged on one end to 7/8".

AIRSIDE:			
Option	Available	Description	Option notes
60	SKV/SKH	Oversized fan motor	This option provides an oversized motor and is available only for the SKV and SKH series of units.
61	SKV/SKH	EC Motor (ECM)	This option provides an EC motor on direct drive units. Consult factory on details regarding voltage, speed and size requirements.
61E	SKV/SKH	Constant volume EC motor	Select this option for an EC motor that provides constant volume on direct drive units. Consult factory on details regarding voltage, speed and size requirements. Must choose at the time of order.
61V	SKV/SKH	Variable volume EC motor – heating only	Select this option for an EC motor that provides variable air volume in heating mode only. Note air volume may be varied in fan only mode as well. A 0-10vdc signal and logic by others. Consult factory for variable air volume in cooling.
62	SKV/SKH	Variable Frequency Drive	Select this option for variable frequency drives for the belt drive fans in the 070 thru 480 sizes.
64	SKV/SKH	Mixing box with economizer control	Select this option for an economizer package for the Bulldog SKV and SKH heat pumps. Economizer package includes return air fan with EC motor, return air, fresh air and exhaust air dampers and 24V AC actuators in an insulated box as well as Flex controller with LCD display. Economizer relays heat/cool fan calls to heat pump.
65	SKV/SKH	High speed fan	This option is a single speed fan and allows the heat pump to run on high speed for heat calls, cool calls, and fan only calls. It can provide high CFM capability at all times.
66	SKV/SKH	100% OA package	This package includes option 23, a pre filter, and 65 % bag filters, ducted filter box.
68.X	SKV/SKH	MERV 7 or 8 filters	This option provides MERV 7 or 8 filters as opposed to the standard filters. 1" or 2" thickness options. Order as 68.1 for 1" filter, 68.2 for a 2" filter.
69.X	SKV/SKH	MERV 13 filters	This option provides MERV 13 filters as opposed to the standard filters. 1", 2", or 4" thickness options. Order as 69.1 for 1" filter, 69.2 for a 2" filter or 69.4 for 4" filter.

2" x 24"	H05	2" F x 2" M	5.83	300	11 1/2	68.0

MATERIALS

Core:	KEVLAR® Reinforced EPDM for H01 & H02 RAYON Reinforced EPDM for H03, H04 & H05
Braid:	Stainless Steel
Fitting:	Brass OT58
Ferrule:	Stainless Steel
Shaft:	Brass, Blowout-proof
Seals:	EPDM
Adapter:	Brass

DESIGN DATA

- 1) All connections are fire rated.
Applicable Standard: ASTM E 84-00
(NFPA 255, ANSI/UL 723 & UBC 8-1)
- 2) Fittings: Brass, MNPT
- 3) Seals: Gaskets

1 ½"	BV4 (ACC-0205)	3.5"	1 ½"	2.89"	5.55"	1.92	118
2"	BV5 (ACC-0219)	3.8"	2"	3.15"	5.55"	2.50	155

MATERIALS & DESIGN DATA

Body:	Hot forged brass ASTM B283, 600 WOG, 325°F
Shaft:	Brass, Blowout proof
Handle & Nut:	Zinc Plated / PVC Coated
Ball:	Hard chrome plated Brass
Ball Seals:	Teflon
Shaft Seals:	Dual FKM O-Rings

SKH/SKV Guide Specifications

Part 1: General

- 1.1 The HVAC system is based on BULLDOG Heat Pump System.
- 1.2 The system will automatically provide the availability of heating or cooling functions 24 hours a day, 365 days a year without need for changeover.
- 1.3 Model selection and performance shall be in accordance with the schedule on the drawings.
- 1.4 Mechanical cooling shall be enabled with Entering Condenser Water below 125°F and 2 GPM/ton.
- 1.5 Each unit/chassis shall be pressure tested with Nitrogen on both the refrigerant and fluid (water) circuits followed by a helium leak detection program for both circuits. Units are then attached to the vacuum system for at least 2 hours and monitored.
- 1.6 Each unit shall be run tested for a minimum of 15 minutes with a water/glycol solution to ensure 100% functionality in all modes of operation. Individual units/chassis shall be self-contained and complete when shipped from the factory.
- 1.7 Units shall be safety certified and bear a seal of approval from one of UL/ULC/ETL or ESA. All units must be AHRI certified and meet ASHRAE 90.1 minimum standard.
- 1.8 Manufacturer shall warrant the parts only of each unit for a period of 12 months from the start-up date or 18 months from the unit shipment date whichever occurs first.
- 1.9 Commissioning of the BULLDOG units(s) shall be performed by a CGC trained technician. A commissioning report shall be provided by the commissioning technician for review and approval by the owner's representative.
- 1.10 It is the contractor's responsibility to have the fluid system properly flushed and cleaned prior to commissioning.
- 1.11 Alternate proposals shall include consideration for equipment space requirements, pipe and equipment sizing, electrical installation impact, operation costs, sound implications and redesign fees.

Part 2: Mechanical Parts

2.1 Housing

- 2.1.1 The housing of the unit shall be constructed based on a frame and panel principle with removable panels for maximum service access.

*(OPTIONAL) Painting of exterior panels on SKV008-060.

- 2.1.2 The unit shall be fabricated with heavy gauge steel with all Interior of cabinet lined with 1/2" acoustic insulation.

No other heat pump does more, with less.

**(OPTIONAL)* Additional acoustical liner shall be used to line the inside compressor base to provide additional sound attenuation.

2.1.3 The supply air opening shall be complete with discharge duct collar.

2.1.4 The service panels shall be easily removable and sufficiently large to allow access to all components.

2.1.5 The unit shall be provided complete with hanging brackets and rubber isolation.

2.1.6 SKH: The cabinet shall be field convertible from straight through air supply discharge to end supply air discharge configuration.

SKV: The cabinet shall be configured at the factory in either left or tight return.

2.2 Blower and Motor

2.2.1 The complete blower section including motor shall be easily accessible and removable for service.

2.2.2 The blower shall be statically and dynamically balanced.

2.2.3 The blower is directly driven by a PSC motor that has an integral thermal overload protection for units up to size 060.

**(OPTIONAL)* the fan motor shall be Electronically Commutated (EC).

2.2.4 The blower shall be belt driven by a three phase motor with integral thermal overload protection for unit sizes 070 and above. The belt drive blower motor fan speed shall be adjustable by means of variable pitch motor pulley. The fan shall be driven by a single drive belt which is sized for minimum 200% of the motor horsepower.

**(OPTIONAL)* The fan motor shall be equipped with a variable frequency drive (VFD) for sizes 070 and above.

2.2.5 The fan motor shall be open drip proof on all direct drive types and shall be totally enclosed fan cooled for belt driven types.

2.3 Filter

2.3.1 The filter chamber shall be an integral part of the system located on return air path and should be serviceable from the front/ rear of the unit.

2.3.2 The filter shall be standard capacity, 1 inch thick "Disposable" type shipped with unit sizes 008-060 and 2" standard on sizes 070 and above

**(OPTIONAL)* MERV 8 & MERV13 filters

**(OPTIONAL)* Ducted Filter Box

2.4 Hydronic Heating Loop

2.4.1 The refrigerant circuit shall not operate in the heating mode.

2.4.2 Heating coil shall be aluminum fin and copper tube construction rated to withstand 300 PSI working pressure.

*(OPTIONAL) The heating coil can be mounted in the reheat position for dehumidification – Humidistat by others.

*(OPTIONAL) Modulating valve for heating

*(OPTIONAL) For Cooling Only units, the heating coil can be omitted. This option provides a water-regulating valve.

*(OPTIONAL) FreeCool units allow for non-compressor based cooling if the supply water is below 450°F

Part 3: Refrigeration Parts

3.1 Refrigeration System

3.1.1 The refrigeration circuit shall be available for operation on non-ozone depleting R410a refrigerant. Refrigeration circuit does not operate in heating mode. Reversing type Heat Pumps must supply a life time Parts & Labour Warranty on the Reversing Valve.

3.1.2 The refrigeration circuit shall have the following components:

- Thermal Expansion Valve with external equalizer
 - Filter dryer
 - High pressure cut-out
 - High pressure service port
 - Low pressure cut-out
 - Low pressure service port
 - Refrigerant Sight glass on unit sizes 070 and above
- *(OPTIONAL) Sight Glass on units up to size 060

3.1.3 The service ports shall be located to facilitate field service with unit in place.

3.1.4 All refrigerant piping shall be of type ACR copper pipe.

3.1.5 The refrigerant circuit and components shall be factory assembled in a sealed, leak and performance tested, properly charged system.

3.1.6 The sealed refrigerant circuit shall be certified for 600 PSIG working condensing pressure.

3.2 Compressor

3.2.1 The compressor shall be high efficiency sealed hermetic rotary type for sizes 008 – 018 and hermetic scroll type for sizes 020 and above. Sizes 120 and above are dual scroll compressors.

**(OPTIONAL)* sizes 024 – 060 can be ordered with two-stage hermetic scroll compressors.

**(OPTIONAL)* sizes 070 – 100 can be ordered with tandem scroll set or dual refrigeration circuits.

**(OPTIONAL)* sizes 120 and up can be ordered with tandem scroll set.

3.2.2 The compressor shall be externally isolated on rubber mounts and connected to refrigerant circuit with floating piping to minimize sound transmission.

3.2.3 The compressor motor shall have integral thermal overload protection.

3.2.4 The compressor shall not operate in the heating mode.

3.2.5 The Compressor shall be provided with a 5 minute restart delay to avoid compressor short cycling and low pressure lockout.

3.3 Direct Expansion Evaporator Coil

3.3.1 The refrigerant to air heat exchanger shall be aluminum fin and copper tube construction rated to withstand 470 PSI refrigerant working pressure.

3.3.2 The coil shall have a maximum face velocity of 500 FPM.

3.3.3 A Stainless Steel insulated condensate drain pan shall be provided under the coil.

3.3.4 Condensate to drain out bottom of drain pan.

3.3.5 External condensate trap is required. Refer to the IOM for details.

3.4 Water Cooled Condenser Module

3.4.1 The condenser shall be high efficiency refrigerant-to-water heat exchanger of copper inner water tube, minimum ½ “ diameter and steel refrigerant outer shell design rated to withstand 600 PSI refrigerant working pressure and 300 PSI water pressure.

3.4.2 The connections shall be female pipe thread mounted flush to the cabinet exterior.

**(OPTIONAL)* Stainless steel braided flexible Supply/ Return 24” hoses are available upon request.

3.5 Valve Configuration – Factory installed

All Units shall be supplied with a 3 way Valve for continuous flow.

**(OPTIONAL)* For variable volume pumping systems, all units shall be supplied with a flow limiting device and two 2 way control valves (1 for Heating and 1 for Cooling)

Part 4: Control Systems

4.1 System

4.1.1 The unit shall be complete with a standard microprocessor controlled electronic circuit board.

4.1.2 The Control panel shall be supplied with individual 24 VAC control transformer.

4.1.3 The control board shall have LED indicators displaying thermostat call, unit operation and Alarms.

4.1.4 The control board shall operate with:

- A 24 volt thermostat
- Onboard fuse protection

4.1.5 A remote alarm contact is available for connection to alarm monitor by others – monitored and wired by others.

4.1.6 BMS override function is available to disable compressor only or disable unit. BMS override and wiring by others.

**(OPTIONAL)* 3rd party controllers supplied by others can be installed and wired in a box outside the unit. This may change the unit's overall dimensions.

**(OPTIONAL)* Condensate High Level Monitor and alarm is available.

**(OPTIONAL)* Different types of Bulldog thermostats are available upon request.

4.2 Alarms

The standard Control Panel shall have the following standard alarms:

- Low Coil Temperature
- High Leaving Water Temperature
- Low Discharge Air Temperature
- Low Refrigerant Pressure
- High Refrigerant Pressure
- High Condensate Level (Sensor OPTIONAL)
